The Chronic Care Crisis

Almost half of all Americans live with a chronic condition.
Their care accounts for 75% of our health care spending.
Only half of care recommended for the chronically ill actually takes place.
Improving care for these Americans requires a transformation of our health care system.
The CHRONIC CARE MODEL was created to guide and speed this transformation.

Whether you are looking for updated evidence on the CHRONIC CARE MODEL or for resources to guide improvements in a practice, the materials on this CD-ROM can help.
